Education

National Institute Of Technology - Delhi

Aug 2023 – Dec 2027

Artificial Intelligence and Data Science

- CGPA: 7.13/10.0
- Coursework: Artificial Intelligence, Machine Learning, Deep Learning, Data Science, Data Mining, Probability and Statistics, Data Structures and Algorithms, Operating Systems, Python, C/C++ etc.

Govt Boys Sr Sec School Seemapuri, Delhi (12th)

- Percentage 78
- Coursework: PCMB

Technical Skills

Languages: C, C++, Python, JavaScript

Web Development: HTML5, CSS3, JavaScript, Bootstrap, Node.js, Express.js, MongoDB, MySQL, REST APIs

Machine Learning & Data Science: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, NLTK

Tools & Platforms: Jupyter Notebook, Google Colab, Hadoop

Cloud Computing: AWS

CS Fundamentals: Data Structures, Algorithms, Object-Oriented Programming (OOP)

Projects

AgriNova – Agriculture + Innovation

[github](#) | [live demo](#)

- Developed a multi-functional web application using **Streamlit** to assist in agricultural decision-making through deep learning, machine learning, and real-time data.
- Integrated a **CNN-based image classifier** (TensorFlow/Keras) for plant disease detection via leaf images.
- Designed a crop recommendation system using classification logic based on soil nutrients, weather conditions, and pH values.
- Implemented fertilizer suggestions using rule-based logic and dynamic **weather-based advisory** via the OpenWeatherMap API.
- **Tech Stack:** Python, TensorFlow-Keras, Streamlit, Pandas, OpenWeatherMap API

Roadmap Generator – Interactive Learning Path Visualizer

[github](#) | [live demo](#)

- Developed a **Streamlit** web app that generates structured roadmaps for any topic using **Google Gemini LLM**.
- Designed interactive graph-based visualization with **PyVis**, supporting customization of nodes, edges, and layouts.
- Enabled users to download generated roadmaps as `.json` or `.html` for offline exploration.
- **Stack:** Python, Streamlit, Google Generative AI (Gemini), PyVis, dotenv

IPL Match Predictor – Real-Time Win Probability Estimator

[github](#) | [live demo](#)

- Built a ML pipeline to predict IPL outcomes using ball-by-ball data.
- Developed an interactive **Streamlit** app for real-time win probability updates.
- Used **Logistic Regression** and **Random Forest** for predictions.
- **Stack:** Python, Pandas, Scikit-learn, Streamlit, Matplotlib

Wonderstay – Seamless Travel Booking & Property Sharing Platform

[github](#) | [live demo](#)

- Developed a full-stack web application enabling users to create, view, and interact with hotel and villa

listings in real time.

- Implemented secure **user authentication and session management** using Express sessions and cookies.
- Enabled dynamic **CRUD operations** for posts (listings), including title, price, and location, with integrated comment functionality.
- Integrated an interactive **map-based UI** to display property locations using external APIs or client-side geolocation.
- Deployed the application using **Render** with a fully managed **MongoDB** backend for persistent data storage.
- **Tech Stack:** Node.js, Express, MongoDB, EJS, Bootstrap, Render
